Verbatim® tapes, optical and floppy disks. Your best defense against data loss.

IMPORTANT INFORMATION TO THE CORPORATE BUYER

## *"Why purchase computer supplies separate from office supplies"*

A popular corporate trend sparked by the recession is to cut costs by reducing vendors and having one supplier for both office and computer supplies. Although on the surface this appears to be a realistic consolidation, one purchase with one delivery, the results do not support this action.

Contract stationers or office super stores have thousands of sku's on relatively low cost items from office product accessory manufacturers. Technical knowledge is seldom required. Most market their supplies at retail less discount with a high fill rate delivery. The addition of thousands of items at much higher costs from new vendors is not a natural progression and therefore not done. Stock is limited or non-existent on computer supplies not considered a commodity. This results in a poor delivery fill rate on the computer supply part of your order. Having no direct access to the original manufacturer, many resort to secondary sourcing. A significant percentage of these products may not be available at all. Without the technical expertise of the individuals devoted to a particular product line, you cannot be serviced in the same efficient manner to which you may have become accustomed. These circumstances all result in much higher costs for the consumer.

Would you buy auto parts from your office supply dealer? Of course not. Then a one source vendor who causes you to seek out other suppliers is obviously not a wise choice. The combination of buying from several sources, higher costs on computer supplies, poorer delivery and limited technical knowledge support the view that contract supply stationers or super stores are not the answer.

The obvious solution is to incorporate the best of both worlds. Find one computer supply source who specializes in all your requirements to complement your current office product stationer. This will result in lower costs for both product lines with superior service. Make a comparison and I am confident you will agree Richard Young is the only national company capable of earning the reputation as "America's choice for computer supplies."

Sincerely,
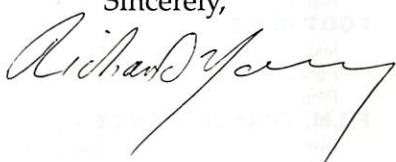

Richard Young, President

DISKETTES, ¼" DATA CARTRIDGES

IBM® Diskettes
Buy an IBM® 3.5-inch Diskette and let us do the formatting.

IBM 3.5-inch Diskettes come to you already formatted! So while you're saving data on our high-quality diskettes, you'll also be saving time. No more interrupting work in progress to format a disk. You'll save money, too, thanks to our new lower price!

The new IBM 3.5-inch 1.0MB and 2.0MB Formatted Diskettes work on all IBM PS/2s, PTS and compatible systems using DOS 3.3 or higher. Each one is thoroughly tested for quality, so you get complete reliability.
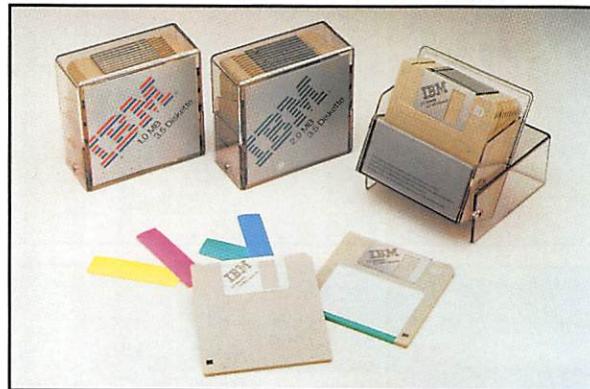

3.5-inch Diskettes	Formatted Capacity	Quantity per Package	Part #	Sugg. Retail	Price Per Box

IBM® ¼" Data Cartridges

Protect your work with the Data and Cleaning Cartridges.

For reliable tape backup applications and archiving, choose IBM's ¼" Data Cartridges. Regular maintenance of your ¼" tape drive with IBM's ¼" Cleaning Cartridge is another step towards protecting your data. The cartridge cleans the read/write head, ensuring error-free data transfer. It comes complete with cleaning pads and solution.

¼" Data Cartridge Description	Part #	Sugg. Retail	Quantity Price/Cartridge

NEW TECHNOLOGY STORAGE MEDIA

IBM® 3480

The IBM® 3480 Cartridge System Tape: the quality computer tape that stores more data in less space.
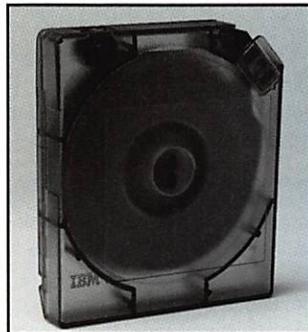

A state-of-the-art manufacturing process and a superior quality control system make the IBM 3480 Cartridge System Tape extremely reliable. Giving you 20% more storage capacity than a 10.5-inch reel of IBM Multi-System Tape in 75% less space, and coated with chromium dioxide, the 3480 Cartridge allows for more consistency, better density, and better resolution than ferric oxide coated tape. From archiving annual reports to storing daily statistics, the IBM 3480 Cartridge System Tape gives you the performance you can count on today – and tomorrow.

Model	Description	Part #	Sugg. Retail	Priced as low as:
3480	½" Tape Cartridge	4770150	$ 9.35	$ 5.90
	Cleaning Cartridge	4780527	29.95	21.00

IBM® 8mm Data Cartridge and Cleaning Cartridge

Get the most out of your 8mm tape drives.

The compact IBM 8mm Data Cartridge inexpensively stores 20 to 30 times as much data as a standard 10.5-inch reel tape. And the IBM 8mm Cleaning Cartridge's "dry" cleaning process keeps your read/write head in top shape.

Model	Description	Part #	Sugg. Retail	Priced Each 5+	20+
RISC System/ 6000™	5 Cartridges per box (112 meters)	21F8595	$29.95	$26.00	$24.00
	1 Cartridge/ 12 cleanings	21F8593	$40.00	34.00	33.00

IBM® Optical Disks

IBM® PS/2 128 MB Rewritable Optical Cartridge: backup you can count on.
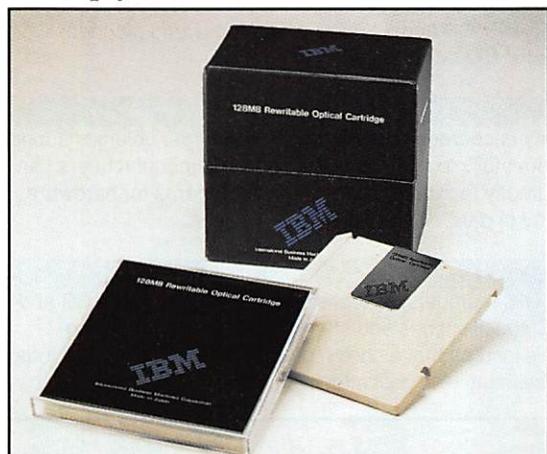

The IBM PS/2 128MB Rewritable Optical Cartridge looks just like a 3.5-inch diskette. But that's where the similarity ends. Because this little package can store the same amount of data as *eighty-eight* 1.44MB diskettes!

With a formatted capacity of up to 127MB and its ability to be written over again and again, this cartridge is ideal for your backup and restore needs, software distribution, and other data transfer applications.

With the optical drive you can completely back up a typical 60MB fixed disk drive onto the cartridge in less than two minutes. And since you can store more on the IBM PS/2 128MB Rewritable Optical Cartridge, you'll handle it less. That's just one more way of insuring data integrity.

Model	Description	Part #	Sugg. Retail	Priced Each
3363	5¼" 200 MB Optical Disk Cartridge	63X4199	$77.00	$60.00
PS2	3½" MB Rewritable Optical Disk Cartridge	38F8646	65.00	58.00

DATA STORAGE TAPE TECHNOLOGY: NEW PLATFORMS OF PERFORMANCE

TAPE STORAGE MARKET TRENDS

Since the media is not removable in Winchester disk drives, an additional method using removable media is needed to backup data in the event of hardware failure, operator error, or other causes of losing stored data. Because opportunities for disaster are many and varied, and the volumes and values of data are increasing at exponential rates, the requirements for data protection have generated continuing strong demand for quarter-inch data cartridge tape drives. Other applications for quarter-inch data cartridge tape drives include data transfer between locations, data interchange between systems, archival storage and the distribution of software. While quarter-inch data cartridge technology will continue to be the dominant removable media technology for the hard disk backup in the foreseeable future, other technologies have emerged, specifically, helical-scan tape drives and rewritable optical disk drives.

Quarter-inch tape and competing removable storage devices for disk backup/restore are targeted at users of desktop PCs, workstations, minicomputers, LANs, and networks. The opportunity for market expansion in the PC business is attractive, as more than 20 million PCs with rigid disks are shipped annually, most of which require tape backup. The workstation market continues as a high growth opportunity, and the advent of LANs, enabling a number of PCs to share data on a common network server, also creates the need for a centralized backup device offering high performance and capacity.

QUARTER-INCH CARTRIDGE—"BACKUP/RESTORE SOLUTIONS FOR TODAY"

No other technology available today rivals the quarter-inch data cartridge as a cost-effective, appropriate solution to the problem of backing up fixed disk drives in the 40 MB to 2 GB range. The capacity and performance of these products are keeping pace with hard disk capacities and market needs. The cost of the drives is lower than alternate solutions for comparable capacity, and drive costs continue to decrease. Further, the compatibility with previous generation products and the ability to interchange data is excellent. This compatibility feature provides one of the main benefits of the technology, and taken with its other features makes quarter-inch data cartridge technology the compelling choice for disk backup applications in a wide range of computer systems platforms, in both the 5.25-inch and the rapidly growing 3.5-inch form factors, today and in the future.

QUARTER-INCH CARTRIDGE—ADVANCING CAPACITIES

QIC compatible 525 MB (QIC-525) tape drives and media have been shipping in volume since late 1990 to the industry. The QIC standard 1 GB and 1.35 GB (QIC-1000 and QIC-1350) drives began shipments in 1991, and a 2.0 GB (QIC-2GBC) and a 2.1 GB drive (QIC-2100C) will begin shipping during the second half of 1992. To meet the increasing user demand for downsizing (3.5" format) while retaining high capacities, QIC has adopted new development standards for advanced capacity minicartridge drives, which also meet the upgrade needs of current users of QIC-40 and QIC-80 backup/restore devices and deliver 500 MB to 875 MB (all in native capacities - by using a 2:1 data compression, all capacities and transfer rates can double). Quarter-inch data cartridge drives are relatively low-cost, with OEM prices starting below $200 for drives up to 60 MB capacity. A typical 250 MB drive with an embedded high-performance controller costs a system integrator about $500. The high-performance 525 MB drive transfers data at about 14 MB per minute, which means that a full backup takes about 40 minutes. Gigabyte-class drives offer further advances in capacity, data transfer rates, and backup time, making them an ideal choice for cost-effective, unattended backup applications. For example, the actual and projected performance and capacity increases for the five year period 1989-1993. Transfer rate increases are 18 times higher in the 5.25-inch format, and 14 times higher in the 3.5-inch format. The capacity increases for this period in uncompressed capacity are 66 times greater for 5.25-inch and 75 times greater in the 3.5-inch format. During this same period, sustainable transfer rates of QIC technologies remain two to three times better (faster) than 4 and 8mm alternatives. In addition, advanced hardware error correction provides data reliability equivalent to one error in 110 years, assuming one backup operation per day. Quarter-inch data cartridge technology offers backward compatibility with previous-generation products and is part of a well understood and industry-accepted migration path of performance capacity supported by industry standards and multiple supplies of drives and media.

QIC technology has relatively low data densities and large available tape area, which combine to make upward migration to higher capacities a fairly straightforward process for both data cartridge and minicartridge product classes. Capacities of 100 GB and higher are currently being publicly discussed and are in development at major industry participants such as 3M. QIC technology will continue to offer the capacity and performance to meet data backup needs well into the next century.

Quarter-inch data cartridge technology offers relatively inexpensive tape drives, excellent compatibility and data interchangeability through the QIC standards, and the ability to purchase interchangeable products from multiple suppliers. Data transfer rates for current products are up to 600 KB per second and will continue to increase. Capacity limitations are no longer an issue with the availability of 1 GB and 1.35 GB drives today and planned shipment of 2.0 and 2.1 GB devices the second half of 1992. The next major step, to 10 GB, is set for 1993.

INDUSTRY STANDARDS AND COMPATIBILITY

Product class standards are invaluable to the buyer and the user, as well as the industry itself. They encourage market growth, and larger volumes support lower product costs. Standards also provide a stable base for product expansion. Users benefit from multiple sources of supply, while manufacturers can achieve more efficient system designs through evolutionary development. Systems integration is greatly facilitated by the use of standards for hardware and software interfaces. Users also benefit from wider recording compatibility and interchangeability of data.

QUARTER-INCH CARTRIDGE—"BACKUP/RESTORE SOLUTIONS FOR TOMORROW"

Current QIC members 5.25- migration directions shows three current 1 GB + drives from different QIC members, addressing 1 GB, 1.35 GB, 2.0 GB and 2.1 GB levels. All data cartridge drive makers are focusing on the 10 GB and 35 GB proposed QIC specifications and standardization. The resulting minicartridge products (3.5") will be at capacity levels of 3 GB in 1993 and 10 GB in 1995. All of this insures that a choice of quarter-inch technology today will make tomorrow's needs for higher capacity and performance backward compatible to today's systems — a cost effective choice!

MICHAEL STEVENS
DIRECTOR-BUSINESS DEVELOPMENT
3M DATA STORAGE TAPE TECHNOLOGY DIVISION
ST. PAUL, MN.

Maxoptix™ - *Tahiti*

A joint venture of Maxtor Corp and Kubota Corp.

Double-sided cartridge offering 1 gigabyte or 650 megabytes of capacity. Available in 512 or 1,024 sector size, glass or poly-carbonate disk. Archival life exceeds 25 years for glass media and 10 years on poly-carbonate. Write-protect switch on cartridge provides for read-only operation. Poly-Carbonate media offers a cost efficient and lighter weight to meet those special needs.

Media has been tested for 10 million read/write cycles. The Maxoptix 650 optical cartridge is fully compatible with any ISO Standard Magneto-Optical disk drive including Tahiti, Sony, HP, Panasonic, Hitachi, or Mitsubishi. The 1 gigabyte optical cartridge offers 50% greater capacity in the same form factor for Maxoptix Tahiti family products. Jukebox versions of the media also available.

TDK
Optical Disk
Technology

CD-W12/CD-W8 Recordable Compact Discs

The recordable compact disc (CD-R) is, technically, a highly specialized write-once optical disk. It is distinct from other write-once formats, however, in its playback compatibility with conventional audio CD and computer CD-ROM players. Digital audio or computer data are recorded by laser using special CD-R equipment (wobbled format – now available from a number of hardware manufacturers). Once the data is thus written, the disk is, for all intents and purposes, equivalent to a mass-produced CD or CD-ROM. Recording capacity is approximately 74 minutes of digital audio or 600 MB of computer data (CD-W12).

EXABYTE EXATAPE™ 8MM DATA CARTRIDGE

The 8mm cartridge tape subsystem isn't your ordinary data storage backup system. It's the most reliable, affordable tape subsystem that you can buy to meet today's increasing storage capacity needs. If your data is important enough for you to invest in an extraordinary tape storage subsystem, why settle for an ordinary 8mm tape cartridge?

Specifically designed for data storage, EXATAPE™ is manufactured to support the high recording density of your 8mm cartridge, stringent tolerance specifications and exacting quality controls ensuring reliable data storage.

Maynard®
An ARCHIVE® Company

3M brand ¼-inch mini data cartridges are just what you need for unattended backup of important data or storing files and applications. And they're a lot easier to handle than a growing pile of diskettes.

That's why more and more businesses are buying low-cost ¼-inch data cartridge drives. They offer a proven track record of reliability and performance. And you can store up to 250 megabytes on a single low-cost, pocket-sized cartridge (depending on drive and data compression software).

It's another reason why more businesses protect important information on 3M brand data storage products than any other brand in the world. Find out more. Call 1-800-888-1889, ext. 52.

One way to save 250* megabytes.

Without a handful of diskettes.

Innovation working for you™

*250 MB achieved using 3M DC2120 Data Cartridge and data compression.
Quarter-inch mini data cartridges require compatible drives.

Save more than ever with these new Verbatim cartridges.

Save more time.

Save more data.

The savings really add up with Verbatim's new high capacity 1/4 " data cartridges.

Our new DL 9100, for example, is compatible for use with QIC-1000 drives and has a huge capacity of 1 Gigabyte. And our new DL 9135 will save even more. Compatible for use with QIC-1350 drives, it stores a massive 1.35 Gigabytes.

But more data isn't all you can save with Verbatim cartridges. With our new Formatted DataLife® 1/4" mini-cartridges, you can also save more time.

Our DL 2080, with QIC-80 format, will save you about 35 minutes formatting time per cartridge. Our DL 2120, also with QIC-80 format, will save you up to two hours formatting time per cartridge. And our popular DL 2000 is now available with QIC-40 format, which will save you 40 minutes formatting time per cartridge.

With the addition of these new products and our recent acquisition of Carlisle, Verbatim continues its tradition of uncompromising quality and reliability in data storage. So next time ask for Verbatim DataLife Cartridges, and get savings you can count on.

Verbatim.

Verbatim
YOUR BEST DEFENSE AGAINST DATA LOSS

Doing More For The Data Process

Verbatim® — Worry-Free Data Storage Products

Whether you operate the world's most sophisticated corporate computer system or a home-based PC, your data's safety is paramount. To ensure the integrity of your data, you insist on high quality, high value data storage products.

From disks to the tried and true half-inch reel tape and quarter-inch data cartridges to the most advanced helical scan cartridges and optical disks, Verbatim Corporation is also your clear choice for consistent quality backup products. Insist on Verbatim for all your backup product needs.

Rewritable Optical Disks — Mass Storage and Fast Retrieval for Information and Images

- Verbatim 5¼" rewritable optical disks provide high capacity storage for LANs, minis and mainframes, and 3½" rewritable optical disks are perfect for PCs and workstations. Both conform to ISO/IEC standards.
- The clarity and purity of Verbatim's proprietary materials ensure the utmost data integrity.
- Integrity of data is assured for 10 years or more.

Verbatim — Committed to Memory

Verbatim offers the best technical support in the business. No matter which Verbatim product you buy, our experts are just a toll-free telephone call away when you have technical questions. For optical questions, dial (800) 759-3475. With questions about our other backup products or floppy disks, (800) 538-8589.

You quickly get answers from experts — a service not offered by most manufacturers. All of our products undergo a statistically controlled testing process. When you buy a Verbatim product, you know that it has been thoroughly tested and that your data will be secure.

SONY SUPERIOR OPTICAL MEDIA

ANSI/ISO Standard REWRITABLE OPTICAL MEDIA

Sony optical media offer the highest quality, data integrity, and reliability in the industry. All magneto-optical media produced at Sony's Sendai Media Plant are tested to ensure a high level of disk quality and reliability. Sony performs 100% Q/A by testing each sector on every rewritable optical disk produced. Features 10 million writes/rewrites, 15 year archival-shelf life, the lowest error rate in the industy with 99.98% usable sectors. 1 year guarantee.

QG SERIES 8MM DG SERIES DDS (4MM) DATA CARTRIDGE

Developed for the 8mm and 4mm data storage. Provides a storage capacity of over 2.0 gigabytes on 8mm and 1.3 gigabyte on 4mm ranging from large computer backups, archival data storage, easy software distribution.

Advanced technology for backup data storage with superior error-free recording - from Sony, the world's leading innovator in magnetic tape design, performance and reliability.

RECORDING MEDIA FOR EVERY JOB
BASF offers a full line of recording media, and they have the one that's right for your job. Choose Endura, Gold or 2000 AD, each manufactured to BASF's exacting standards. Look to BASF, the first name in magnetic recording tape. **ENDURA** is the best performance for the money. Guaranteed for entire 800-6250 BPI densities. Each reel is 100% certified to meet or exceed all IBM media requirements, and features the cleanest, squarest edge in the business, with a 3 year warranty.

PREMIUM TAPE AT COMPETITIVE PRICES
GOLD premium tape is 100% error free, has a 25 year warranty, and meets or exceeds all IBM media requirements over entire 800-6250 BPI recording density range.
**2000 AD** is BASF's super-premium tape. Each reel is individually certified 100% error free. Tolerances are 75% higher than tape requirements, and they have a lifetime guarantee.

New Reliable High Capacity Storage Rewritable Magneto Optical Disks

Rewritable Storage Media

The new BASF EXTRA Magneto Optical Disk is an optical storage medium on which information can be rewritten as often as desired. It meets the highest quality requirements in all computer applications.

BASF Optical Disks are the Number One choice of users with applications that demand high storage capacity and fast random access time. This is particularly true with the exacting requirements of image processing, CAD/CAM, multimedia, desktop publishing and databases.

Exceeds Industry Standards

Our Magneto Optical Disks surpass ISO and ANSI standards, ensuring data integrity and long-term storage reliability. They are compatible with a wide range of commercially available drives such as Sony, Ricoh, Sharp, IBM, Hewlett-Packard, Maxoptix, etc.

# IT'S BASF DISKETTES!

- BASF diskettes are compatible with almost every computer application.
- BASF diskettes are certified 100% error free.
- BASF diskettes are offered in double density, and high density.
- Preformatted diskettes are available for DOS and Macintosh, a great time saver for the busy user.

See page 83 for pricing information.

Dysan®

A Name That Measures Superiority
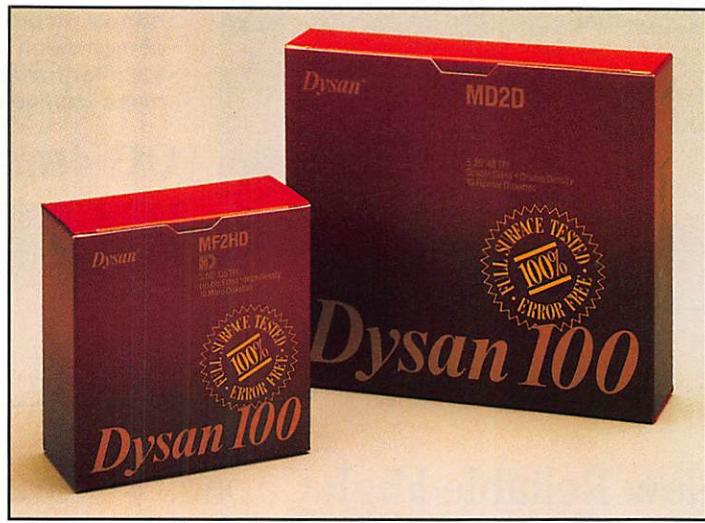

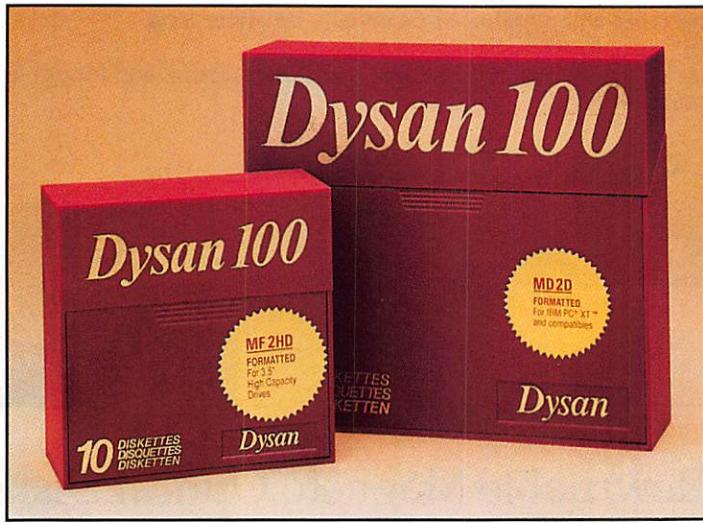

AVAILABLE IN FORMATTED AND UNFORMATTED

Ultra High Clipping Level
At the factory, we adhere to a clipping level of 75% for Dysan 100 diskettes, compared to the industry standard of only 40%. Our high clipping level is another way we achieve the uncompromising quality Dysan is known for.

Two-Piece Jacket Liner
Dysan 100 diskettes feature a non-woven, two-piece polysynthetic liner. This eliminates the "pillowing" effect that sometimes occurs with one-piece liners, and provides for consistent rotation and improved overall performance.

Fully Automated Manufacturing
Dysan's fully automated manufacturing process is unique within the industry. This automation is your assurance that every Dysan 100 diskette—in every way—is 100% better.

What Makes Dysan 100 Superior?

Full Surface Certification
All Dysan 100 diskettes are tested and certified to be 100% error free over the full surface of the disk. Dysan's continuing commitment to testing both on and between the tracks helps to prevent data loss due to misaligned drive heads and protect your most valuable data—even when diskettes are swapped among different computers.

Long Wear-Life Media Formulation
Our patented magnetic coating formula yields a visibly smoother overall surface that not only significantly reduces head wear, but also extends the optimum life of Dysan 100 diskettes to as long as 22 years!

Dysan Magneto Optical Disks Meet ISO Standards

WHY SURGE SUPPRESSION

Power fluctuations occur constantly, potentially damaging PC's or any electronic equipment. These voltage "transients" can be caused by lightning, utility company load switching, motorized equipment such as elevators, and even coffee makers. Along with electromagnetic and radio frequency interference (EMI/RFI), surges have the potential to cause data loss and downtime, the result of which can be devastating and many times more than the value of the equipment. Surge suppressors provide protection and insurance against these threats. Here is what to look for.

TYPE OF EQUIPMENT NEEDING PROTECTION - What type of equipment are you looking to protect? The more expensive and sensitive the equipment, and the higher the value placed on data and downtime, the better protection needed. For example, an electric typewriter requires a surge suppressor with standard MOV protection with a limited warranty. When you get into something more complex, like a 386/486, top notch protection should be used, a surge suppressor having 3 line, 3 stage protection, with a 330V UL rating, high energy dissipation capabilities, lifetime warranty along with a connected equipment guarantee.

STAGES OF PROTECTION - A surge suppressor works with energy absorbing components called MOVs (metal oxide varisters). Usually the more MOVs, the better. In superior surge suppressors, additional components are added to enhance performance. A SAD (silicon avalanche diode) is added for quick response time in stopping a surge. Additionally, a gas tube is incorporated to absorb very high levels of energy. Surge suppressors with gas tubes have been known to protect equipment from lightning.

WARRANTY - Surge suppressors usually come with warranty extended anywhere from 1 year to lifetime. Of course the longer the warranty, the better for the end user. Some superior models not only come with a lifetime warranty but also a Connected Equipment Guarantee which states that as long as you own this unit, the manufacturer will repair or replace any connected equipment if damaged by a surge while properly connected, EVEN IF THIS DAMAGE WAS CAUSED BY LIGHTNING.

ENERGY DISSIPATION - This tells you how large of a surge your surge suppressor can handle before it sacrifices itself to protect your equipment. This can be measured in AMPS or JOULES and the higher the number, the larger the surge the unit can handle.

UL 1449 RATING - UL (Underwriters Laboratory) specification 1449 is a test for surge suppressors rating their ability to limit a surge. The lower the UL rating, the better the protection. Common ratings are:

> 330 volt - Best
> 400 volt - Better
> 500 volt - Good

Anything above 500 volts, or without a UL1449 rating, is an inferior product and should be avoided.

LINES PROTECTED - Electrical wall outlets are connected to three lines to receive power. These wires are called hot, neutral, and ground. Surge suppressors may not have protection components across all three lines. Often times, protection across hot-neutral is sufficient. The more lines protected, the better. For best protection, components should cover all three lines, hot-neutral, hot-ground, and neutral-ground.

SURGE INDICATION - When a surge suppressor takes a large enough surge, its protection components are destroyed and you no longer have protection. How can you tell if a surge has occured? Various models may come with a visual indicator (light), audible indicator (buzzer), or both. Indicators inform the user that surge protection no longer exists.

In conclusion, it is important to recognize that a surge suppressor is insurance...insurance not only against damage to electronic equipment, but also against loss of valuable data and downtime. As with any purchase, you get what you pay for. When you consider the selection criteria outlined here, chances are, you won't be paying the price later.

NEW...FROM SL WABER
WAVE TRACKER - The ultimate in surge protection and noise filtration

SL WABER™

TESTED TO UL
1449 STANDARD
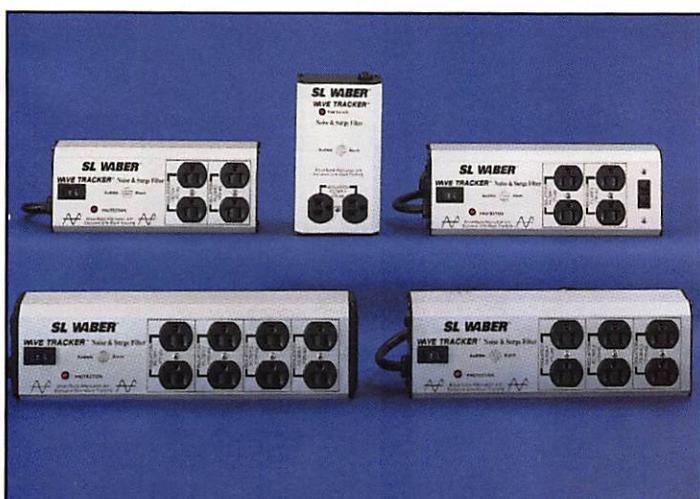

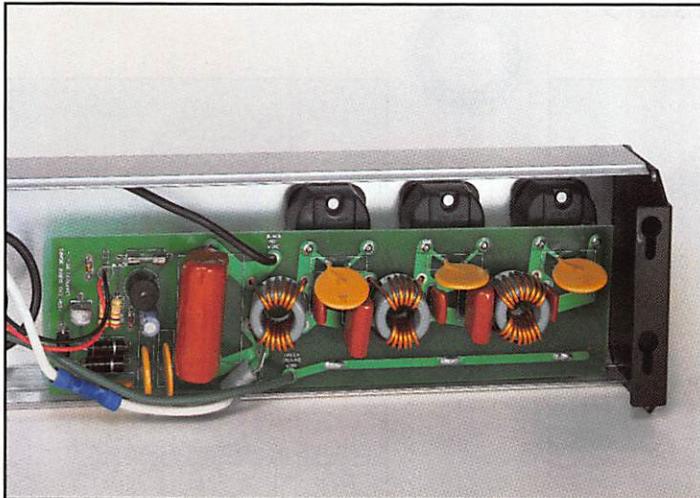

WAVE TRACKER'S SINE WAVE TRACKING feature ensures a close clamp on incoming surges. Surge and noise isolation prevents interference between protected devices. The "series" noise filtration allows you to choose the level of filtration you need.

ALL WAVE TRACKER models feature:

- Over 800 joules/65,000 amperes maximum surge current
- Audible and visual surge loss indication
- Transverse and common "Series" noise filtration
- Isolated duplexes eliminating interference between devices
- Pico-second response time
- UL1449 rated at 330 volts...UL's best rating
- Lifetime Connected Equipment Guarantee

MEDGARD® For Hospital Use

MEDGARD® SERIES Of Outlet Strips And Surge Suppressors

These heavy duty outlet strips and surge suppressors contain hospital grade components.This means reliability and safety in hospitals, labs and other critical environments. All Medgard® products exhibit superior voltage breakdown, ground integrity, and low leakage current.

SURGE SUPPRESSORS

N E W ! Each Medgard® surge suppressor is designed with our patented 3 stage circuitry to give you the industry's best surge protection device. Line Voltage: 120VAC, Line Current: 15A, Frequency: 60Hz, Max. Surge Current: 26,525A, Max. Surge Voltage: 6,000V, Clamping Response Time: 1 Psec. UL1449 Suppressed Voltage Rating: 400V, Visual Surge Indication. Lifetime Warranty.

MULTIPLE OUTLET STRIPS

All Medgard® products feature HD hospital grade plug, cord and receptacles all housed in a durable steel case. Each electrical component has been listed by UL as "Hospital Grade". All units have passed the critical low leakage specification required by UL for exacting environments. Line Voltage: 120VAC, Line Current: 15A, Frequency: 60 Hz, Lifetime Warranty.

* Gold Seal Warranty provides for the repair or replacement of your Gold Seal product _and_ connected equipment...for life!

Tripp Lite's complete surge suppressor line, including fax/modem and economy models, are available. Call your Richard Young sales representative for more information.

ISOBAR®

ISOBAR® the most electronically advanced surge suppressor provides protection from surges, spikes, line noise, and also comes with Tripp Lite's exclusive Gold Seal Warranty, protecting connecting equipment...for life!

ISOBAR® surge suppressors feature filter isolation, an exclusive design that eliminates interference between each device. And ISOBAR's® "cascade design" spike and noise suppression circuitry allows you to choose the level of protection you need.

BC STANDBY UPS SYSTEMS — THE MOST AFFORDABLE UPS WORLD-WIDE

MADE IN USA

• Large batteries for longest battery life industry-wide
• Complete blackout, brownout and surge protection
• No installation required
• Two millisecond transfer to battery
• Audible warning alarm
• Full two year warranty

With superior performance, reliability and selection, the BC series protects your expensive computers and networks from power failures, brownouts, surges. They're ideal for stand alone PCs and LAN nodes. BC units feature 2 ms. transfer time, regulated battery charger, and larger batteries for the longest battery life and backup times industry wide. The BC 400 and higher include an audible alarm. Starting at just $139, the BC series are the world's lowest priced UPS systems. Made in USA. Full two year warranty.

Software and cabling is available for all UPS LAN systems. Call your Richard Young sales representative for more information.

UNISON® ON-LINE, SINE WAVE SYSTEMS

Ideal for applications requiring the ultimate in UPS technology. UNISON® gives you true on-line, sine wave UPS protection with standby UPS affordability. These units provide complete blackout and brownout protection with zero transfer time, and continuously regulated AC output that corrects brownouts down to 90 volts without using battery power. All models include interface port for unattended shutdown (except PS 4.5) and remote control via modem. From Novell to LANtastic, 3Com, and AppleShare, Tripp Lite UPS systems support unattended shutdown of more network operating systems than any other UPS manufacturer. The PS Series is housed in a sleek, low profile under-monitor cabinet and features emergency keyboard lighting. The MPS Series is housed in a "tower" design with the smallest footprint in its class. Full two year warranty.

LINE CONDITIONERS

Line Conditioners keep your system up and working through brownouts. They maintain safe, reliable AC output through brownouts and overvoltages. Without line conditioning, brownouts can quickly overheat a computer's internal power supply causing hardware damage. The LC 1200 and higher models feature built-in ISOBAR® surge suppressors for superior surge protection and line noise filtering. LC 1800 and higher models have LED indicators. Full 2 year warranty.

LINE STABILIZER/CONDITIONER

Glare/Guard.®

OCLI

Relieves glare, induced eyestrain, headaches and fatigue caused from prolonged work at computers.

Optically coated glass filters eliminate glare, reduce existing ultra violet, infrared and X-ray emissions. In addition block up to 99.9% of ELF/VLF (extremely low and very low) electric field radiators.

Glare/Guard® *Professional Plus*™

Glare/Guard® *Universal Profile*™

Glare/Guard® *Profile Plus*™
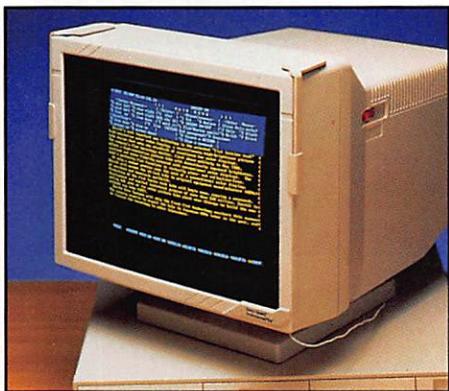

Flat frame filter includes Slimfit™ Hangers.
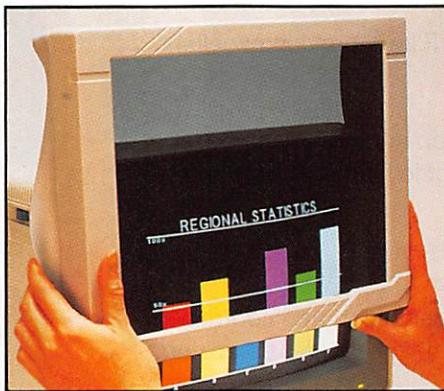

Universal Profile™ (patent pending) sleek slip-on design filter is mounted in a molded non-reflective plastic frame that wraps around the front of the monitor. A flexible lip on the back grips and conforms to the monitor, sealing out dust and light.
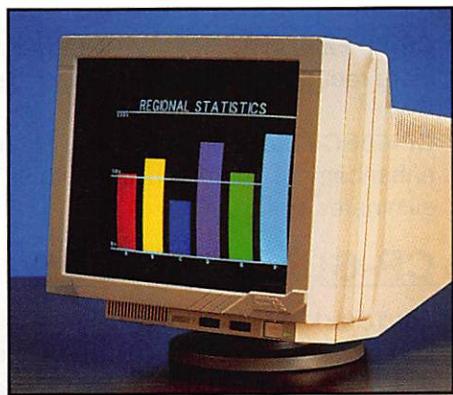

Glare Screen	Description	Sugg. Retail	Your Price
UNIVERSAL PROFILE™	Molded wrap around frame glass filter reduces glare 99%	$ 69.95	49.90

Polaroid Circular Polarizing Filters
Turn Your Monitor Into a High Quality Display!

NOTHING WORKS LIKE POLAROID!

Polaroid CP-Filters combine optical quality materials, durable optical coatings, and feature circular polarizing technology to provide the ultimate in glare reduction and contrast enhancement. Because of the very efficient light management properties of circular polarizers, Polaroid CP-Filters suppress up to 99% of reflected light and are more efficient than other kinds of filters for improving contrast. The difference is immediate and dramatic.

NEW CP-60 SERIES FILTERS

For 9"-15" monitors. Utilizes circular polarizing technology, optical quality triacetate and proprietary optical coatings to reduce glare and enhance contrast. More durable than many glass filters comparably priced. An attractive and convenient mounting system provides easy installation. Three sizes fit most terminals in the 9"-15" diagonal range.

CP-60 Filters — Low cost, light weight CP-Filters provide excellent glare reduction and contrast enhancement.

CP-60SC Filters — Excellent glare reduction and contrast enhancement. Also reduces up to 98% electric field radiation and eliminates static.

CP-GLASS FILTERS

For 10"-21" monitors. The ultimate in glare reduction and contrast enhancement. Polaroid CP-Glass filters combine circular polarizing technology with top quality optical glass and durable optical coatings. Streamlined universal mounting system allows for just four sizes to fit this complete range of computer displays.

CP-90 Filters — For 10"-15" monitors. Superior glare reduction and contrast enhancement. Reduces up to 98% electric field radiation and eliminates static. Two sizes fit most monitors in the 10"-15" diagonal range.

CP-Workstation Filters — For 16"-21" monitors — Optimum in glare reduction and contrast enhancement. Reduces up to 98% electric field radiation and eliminates static. Two sizes fit most monitors in the 16"-21" diagonal range.

Polaroid PolaClear

cleans optical surfaces — glass, acrylic, or plastic, coated and uncoated.

Free PolaClear sample with every filter purchase.

3M THE SOLUTION FOR PRIVACY, GLARE AND RADIATION PROBLEMS

3M Privacy Plus Filter PF400 With Anti Radiation

The 3M Privacy Plus Filter PF400 protects your privacy and reduces glare and radiation. Once the filter is installed, only an operator seated in front of the monitor can see the displayed information. People viewing from the side see a blank, dark screen. The filter virtually eliminates glare, helps prevent eyestrain and greatly improves screen contrast. It blocks 99.9 percent of ELF/VLF E-field radiation, and stops static charge and dust buildup.

Description	Part #	Sugg. Retail	Your Price
Large (for 14" to 15" Monitors - 9⅞"H x12⅞"W)	30434	$176.95	$115.00
Small (for 10" to 13" Monitors - 8¾"H x11⅝"W)	30430	176.95	115.00
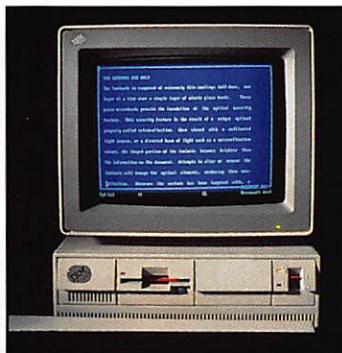

Straight on with
3M Privacy Filter installed
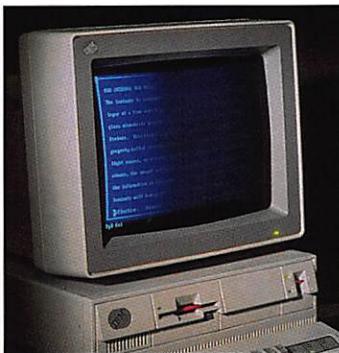

Side view with
3M Privacy Filter installed

People viewing a screen from either side see nothing but a blank, black screen when it's protected by a 3M PF400 or PF300 computer filter. An operator seated in front of the terminal has a completely unobstructed view.

3M Privacy Anti-glare Filter PF300

The 3M Privacy Anti-glare Filter PF300 protects your privacy and reduces glare. Once the filter is installed, only an operator seated in front of the monitor can see the displayed information. People viewing from the side see a blank, dark screen. The filter virtually eliminates glare, helps prevent eyestrain and greatly improves screen contrast.

ERGONOMIC ACCESSORIES TO IMPROVE PRODUCTIVITY & COMFORT

Ring King
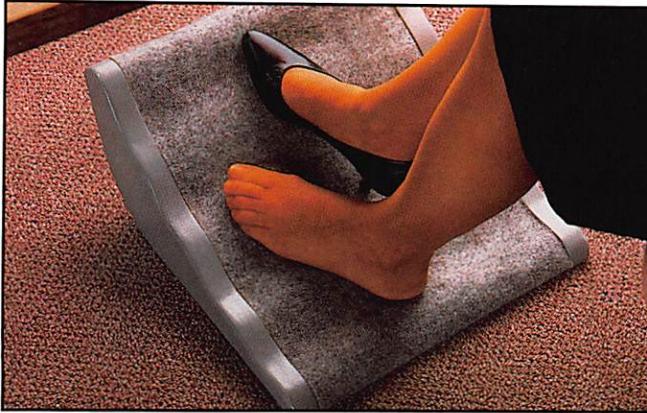

ERGONOMIC FOOT REST

Designed to meet the ever-growing need for products that address the health, safety, and comfort of the office worker. The Foot Rest lessens pressure on the back of the thighs, and helps align the spine while in a sitting position, thus reducing lower back strain. It has a rippled surface that massages the foot to relieve stress and increase circulation to the feet and lower legs. Adhesive pads help prevent Foot Rest from slipping while in use.
Stain-resistant carpeting.

Stock #	Description	Sugg. Price	Your Price
94330	Ergonomic foot rest	$39.95	$26.63

ERGONOMIC WRIST REST

The Keyboard Wrist Rest is designed to provide comfortable ergonomic support for your wrist and palms during keyboard operation and can help prevent the onset of Carpal Tunnel Syndrome. When in use, the Keyboard Wrist Rest can be pulled out to adapt to each user's arm length, keyboard type, and particular furniture characteristics. Made of durable molded plastic to provide ample wrist support. For comfort, the keyboard-length soft vinyl pad is embedded at an ergonomically correct angle to match most computer keyboards. Easy to install - just slide under your keyboard. Neutral light grey with dark grey vinyl pad, to match most computer equipment. Unit measures 19⅝₁₆"W x 9"D x 1¼"H.

Stock #	Description	Sugg. Price	Your Price
94300	Ergonomic Wrist Rest	$14.95	$9.96

UNDER DESK KEYBOARD PLATFORM

The adjustable Under Desk Keyboard Platform attaches easily to most work surfaces that are at least 18½" wide by 18⅞" deep. The platform pulls out a full 12" when in use and slides back under the desk for out-of-the-way storage when not in use. For universal applications the platform rotates from side-to-side up to 360 degrees. An easy-to-use ratchet lever lets you tilt platform forward up to ten degrees or backwards five degrees. With all this adjustability, you're assured a custom fit each time you use your keyboard. The Under Desk Keyboard Platform holds any width keyboard that is from 6¼" to 8⅞" deep and not more than 2⅞"H. Your keyboard is clamped securely to the platform and won't slide around while in use. A full-length padded wrist/palm rest provides comfortable support while keying. BIFMA approved. Mounting hardware and template included. Unit measures 18⁹⁄₁₆"W x 18½"D x 5¼"H.

Stock #	Description	Sugg. Price	Your Price
76507	Adjustable Underdesk Keyboard Platform	$119.95	$79.00

ADD-ON KEYBOARD DRAWERS

Designed to fit most computer furniture, these add-on keyboard drawers come with dual storage bins for small office supplies. Units feature an integral palm rest, built-in handle, cord-routing system and drawer bottom foam cushions. Drawers mount easily to make maximum use of workstation space. 23⅝"W x 20⅜"D. Interior Drawer Dimensions: 20¼"W x 9"D x 2⅞"H.

TURTLE Brand Magnetic Media Transporters

HARD SHELL PROTECTION
FOR COMPUTER TAPES
IN STORAGE OR TRANSPORT

Every TURTLE incorporates these standard features:

- Patented double-wall, high-density polyethylene shell for strength and durability.
- Full-scale temperature protection for truly critical recovery situations.
- Fixed, molded divers, no inserts or foam.
- Interlocking lid and base to seal out dust and moisture, and provide stacking stability
- Double-action latches plus tamper-proof seals or steel stock-bars
- Lightweight, compact construction and recessed handles for easy transport and storage.
- Non-textured inventory labeling area for easy marking and identification.
